

HIV opportunistic infections can be treated!

Cabinet Statement: "No person should be sent away and not treated irrespective of their HIV status.

Given the critical importance of drugs dealing with infections such as meningitis, oral thrush, TB and pneumonia, Cabinet urged the public, especially people living with AIDS, to assist government in monitoring their availability."

**People living with HIV
need treatments for OIs
and antiretrovirals
(ARVs).**

Illnesses common with HIV are called opportunistic infections (OIs). Most OIs can be prevented or treated at clinics.

**Inform yourself to
stay healthy and
stand up for your rights.**

Support voluntary HIV counselling and testing.
There are direct benefits if you know your HIV status.
There are medicines that improve your health.
Always practise safer sex and use condoms.

Treat the people. Save lives!
